## **Volito Swing**

### Safety Standards & Guidelines - Reference Information

The Volito Swing was designed to allow multiple children to swing and engage together. For many years the only swings available for kids to use together were tire swings, which are fun and challenging but presented opportunities for improvement. Tire swings are able to rotate and pivot in all directions, often in an unpredictable manner and, because they aren't easy to propel while sitting on them, other children often have to push the swing to gain and maintain motion. The Volito Swing, along with many similar swings in this growing market trend, provides a multi-user swing that moves in a single axis to-fro motion.

The Volito Swing is IPEMA Certified and meets or exceeds the requirements of ASTM F1487-17, which is recognized as the standard of care in the playground industry. This ASTM public playground safety standard is revised every two to three years to remain current with innovation and market trends.

The CPSC Public Playground Safety Handbook hasn't been revised since 2008 and doesn't include new product categories that have been innovated in recent years. There are a couple of points to note when deciding to purchase a multi-user swing:

- Multi-user swings are innovative and CPSC Public Playground Safety Handbook doesn't have a standard that specifically covers them.
- CPSC 5.3.8.3.1 – CPSC recommends that belt swing seats should be designed to accommodate no more than one user at any time. While the Volito Swing is a single axis swing, it is clearly not a belt seat.
- CPSC 2.3.1 – CPSC says that swings intended for more than one user are not recommended because of their greater mass, as compared to single occupancy swings, presents a risk of impact injury.
  - The ASTM safety standard, F1487, was revised in 2011 to add maximum impact requirements for swings and the Volito Swing has been tested and is compliant with ASTM impact requirements.
  - CPSC has written a letter stating that “the swing impact test in F1487-11 is a reasonable approach to address the concerns posed by unoccupied, heavy, multiple occupancy swings.”
- CPSC has always included an exemption to both recommendations listed above for tire swings, which are multiple occupancy swings that are suspended from a single pivot and permit swinging in any direction.
- CPSC also emphasizes that their Handbook provides recommendations, not requirements. If a jurisdiction adopts the Handbook's recommendations as mandatory requirements, that jurisdiction would need to determine how the requirements should be applied in any particular instance.

Without limiting the generality of the foregoing, Burke will not be responsible for labor costs involved in the removal of products or the installation of replacement products. Some states do not allow the exclusion of incidental damages, so the above exclusion may not apply to you.
